

I am a truck driver, and I purchased the XM Satellite Radio system and service for use in my 18-wheeler. The XM Instant Traffic & Weather service provided by XM Radio is indispensable for my daily driving. This service provides continuous real-time information as compared to the local stations, which carry this information intermittently, if a local station can even be found. The XM Radio service also eliminates the need to endlessly scan through the dial looking for stations, which may or may not exist in some more rural areas that I drive through. I willingly pay for the XM Radio service so that I have access to a variety of programming, much of which is either unavailable in local markets or is difficult, if not impossible, to maintain uninterrupted reception. I urge you to oppose HR 4026 and the National Association of Broadcasters in its efforts to restrict satellite radio service options.

Thank you for your time.

Sincerely,

Wade Brickheimer
